Caveats: FOUO

SLIDE is an appropriate model to use for slope stability. SLOPE/W, SLIDE, UTEXAS4, WINSTABL and STABLPRO have been used successfully as long as an appropriate factor of safety is used.

SLIDE is comprehensive and examines each media slip face as well as the system as a whole. Presently, we would prefer a FOS of 1.5 due to variability in material properties, construction practices and localized site conditions instead of 1.3 that has been used in the past.

Paul

Importance: High

Hello Dana, Matt and Sarah,

As promised, here are the compiled final working draft comments on the Gasco pre-RD BOD work plan. Please make any edits in redline. If at all possible we would like to have suggested changes back in 5 business days. So that you don't miss it-relative to how RALs are applied- if you have specific wording notions on comment #43 that would also be particularly useful feedback.

Let me know if you have any questions —and see you next week.

Thank you.
